

# Britannicus Stone

---

## Ledmore Grey

This impressive stone from the Ledmore Quarry in Sutherland is the only marble quarry on mainland Britain, the other is on the Isle of Skye. The Ledmore Grey marble contains large white veins made up of calcium compounds, black veining originating from organic compounds and brown veining from copper compounds. All the colours of which are brought to life with polishing.

## Slab Dimensions:

Typical slab sizes are 2 m x 1 m;  
however they can vary.

## Finishes:

Polished, Honed, Aged, Sawn Cut, Sanded,  
Bushhammered, Tumbled and so on.

# The Ledmore Family

The other stone that sits in the Ledmore family is Ledmore itself.

## Ledmore

This stunningly beautiful British stone is the only true marble on mainland Britain and is consequently treasured across the globe. Ledmore usually consists of large white veins resulting from calcium compounds, lime green veining originating from copper compounds, and grays and blacks from organic compounds; in short a facsimile of British geological history.

With the initial deposits laid down 600 million years ago, the veining is relatively young at 430 million years.

## Sustainability:

We take our responsibility to be as environmentally sustainable as possible very seriously and even though Stone is already ahead of almost all building materials in its green credentials, this doesn't mean we shouldn't try to continue to innovate and drive the environmental costs of using stone ever downwards. Our message is clear: *British stone is environmentally the right choice and will continue to be so.*

### The Stone Federation of Britain

As a responsible stone company, we have strengthened our relationship with the British Stone Federation and fully support the Stone Federation Sustainability Statement.

The Stone Federation is passionate about the natural stone industry playing its part in delivering a more carbon and environmentally responsible built environment and ensuring an ethical and responsible supply chain.

As part of this we have signed up to the revised version of the Sustainability Statement which all members are asked to sign up to. Stone Federation members are encouraged to:

**Act** - Be proactive in implementing sustainability, ethical sourcing, environmental and carbon reduction policies within their business.

**Measure** - Measure their carbon, environmental and supply chain impact including business operations, material extraction and production.

**Disclose** - Be transparent about their carbon, environmental and supply chain impact and the ways in which they are working to reduce this and ensure that the information is accessible to clients.

**Target** - Be specific in targeting areas where they can reduce the carbon and environmental impacts of their business. These target areas should be at least in line with the Government's own Net Zero Carbon targets for the construction industry (78% reduction in emissions by 2038, 100% reduction in emissions by 2050).

**Adjust** - Continue to measure and assess their progress against their carbon, environmental and supply chain goals and adjust practices where necessary.
